# Unique Sturdi-built Features

**Clear, All Heart, Kiln-dried Redwood:** Our Redwood is the highest quality material available. It is warm, beautiful and durable. Heart redwood is naturally resistant to deterioration, more energy efficient than aluminum and allows for easy addition of accessories. Every board is milled to exacting specifications.

**Customization:** Most of our models can be modified to fit unique situations – we do it regularly. Custom greenhouses can be designed to fit pre-existing foundations or other special needs. Most models are available in other sizes & lengths. Call us to discuss your needs.

**Glazing Materials:** Standard glass is the glazing material of choice for our greenhouses. It is attractive, strong, economical and long lasting. However, for areas with large hail, numerous large pinecones, or other breakage issues, tempered glass or 6mm twin-wall polycarbonate glazing is available for the roof and/or walls at a moderate additional cost. A popular combination is the use of twin-wall in the roof and clear glass in the walls.

**Partition Walls:** These are available for most models. Use an inner glass wall with door to create different environments in one greenhouse. Prices are available on request.

**Handmade Wood Doors:** A standard part of each model, our greenhouse doors are specially handcrafted in our shop. The size & type of door varies with the greenhouse size and model. Doors can be hinged right or left and be made to swing in or out. Unless otherwise specified, doors will be made to swing in to minimize potential wind damage. Doors can also be “dutched” for a small additional fee. Please specify when ordering.

**Jalousie Windows:** These are special louvered windows to help with ventilation. They can be put in the walls or door. Can be equipped for automatic operation. They come with a “storm-window” type covering for the winter. Each is attractively framed in redwood.

**Barcaps:** Designed to help preserve the looks of your greenhouse, barcaps are specially milled trim caps that fit onto the glazing bars after the glass (or other glazing) is installed. They help finish the greenhouse and protect and extend the service life of the glazing system. Furnished with stainless steel screws to protect from rust.

Soil Bench

Slat Bench

Double Tiered Bench

## Benches

Our benches are made of all Heart construction grade Redwood or select Western Red Cedar. Easy to install. Our standard benches come complete with galvanized legs. Special all wood benches with one or two levels are also available.

**Standard Benches** come in 3 types:

**Soil Type** (for propagating) – extra deep 8" sides, 1" bottom boards

**Slat Type** – narrow spaced boards. Strong, good for potted plants.

**Combination** – part slat, part soil

**Special All Wood Benches** are available with one or two levels in a wide variety of sizes. Can be custom made for your greenhouse. Come ready for you to assemble.

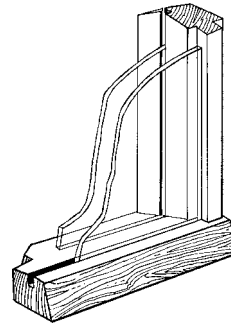

Note: Number and width of benches depends on the greenhouse model.

## Sturdi-built Thermal Option™

Our exclusive insulating option is available in window clear acrylic, twin-wall polypropylene. If you are worried about efficiently heating or cooling your greenhouse this option is for you.

Our Thermal option allows the addition of an inner glazing to result in a double-glazed, insulated greenhouse, creating a highly efficient unit while retaining all the fine greenhouse features and beauty of a Sturdi-built Greenhouse.

The Thermal Option can be purchased with the greenhouse or added any time in the future.

**Choice of materials for inner glazing:** Our system accommodates a variety of materials for the inner glazing – window clear acrylic, white twin-wall polypropylene, translucent flat fiberglass or a combination of these materials. With several different combinations, you can choose the best one for your situation. One popular inner glazing arrangement is twin-wall polypropylene for the roof and window clear acrylic for the walls. This combination results in overhead light diffusion while maintaining the beauty of clear viewing through the walls.

**Inner glazing is removable:** This solves a common problem of double-glazed greenhouses – what to do about debris collecting between layers. Our design allows for the removal of the inner glazing for periodic cleaning or for seasonal exchange with different panels for flexible light control.

**Effective and well suited to greenhouses:** The insulating air space between the inner and outer glazing is 5/8". Together with our naturally heat-efficient wood construction, this makes Sturdi-built one of the most thermally efficient greenhouses available. When the twin-wall material is used you get an even more effective triple (with outside glass & inside twin-wall) or quadruple layer (with inside and outside glazing being twin-wall). Our Thermal Option is designed to breathe to accommodate the high humidity levels and moisture condensation always present in greenhouses, garden rooms and spa enclosures. Moisture won't hurt our glazing system whereas it can ruin traditional factory insulated windows.

**Flexible installation:** You can add the Thermal Option to all of the greenhouse or any part of it, now or later. For example, the roof alone can be done with twin-wall for light diffusion and insulation. Walls can be done later, if desired, with the same or different materials.

**Fine appearance with utility:** Installation of this option is simple and clean. The fine appearance and beauty of your greenhouse is maintained, plus there is no interference with hanging baskets, shelves, fixtures or accessories.

Prices for the Thermal Option are shown along with the greenhouse prices. You can choose from twin-wall polypropylene, clear acrylic or fiberglass in whatever combinations you prefer.

**Exclusive Factory Prefabrication:** Our Prefabricated greenhouses are unique in the industry. End walls are factory pre-assembled and shipped in complete sections. Doors are pre-hung. Roof and side walls are shipped as pre-cut components, marked and drilled for assembly into complete sections. This is much easier than the “Erector Set” type kits.

Note: All units are shipped unglazed. Glass or other glazing product is provided and must be installed after the greenhouse framing is erected.
